SUMMARY

Tech Lead and Full-Stack Engineer with **5+ years of experience building enterprise systems, SaaS products, and AI applications.**

Product-oriented, with strong expertise in **React** and **TypeScript**, backend experience in **Go, Java/Spring, PHP/Laravel**, and **Python/Django**, and hands-on experience with **AWS cloud infrastructure**. Experienced in **0→1 product development, system architecture**, requirements definition, technical standardization, code review, and cross-functional project delivery.

Currently working on a **next-generation enterprise WMS platform** at Frameworks, Daiwa House Group.

SKILLS

Frontend:

React, Next.js, TypeScript, JavaScript, React Native, TanStack, MUI, Tailwind CSS

Databases & Security:

PostgreSQL, MySQL, DynamoDB, Keycloak

Backend:

Go, Java / Spring, PHP / Laravel, Python / Django, Node.js

Engineering:

System Design, Requirements Definition, Architecture, Technical Leadership, Code Review, Agile Development, API Design, Performance Optimization

Cloud & Infrastructure:

AWS, Terraform, Lambda, API Gateway, AppSync, DynamoDB, Amplify, S3, CloudFront

AI:

AI-driven R&D, RAG, Workflow Automation, LLM Integration, Prompt Engineering

EDUCATION

Master of Business Administration (MBA), in progress, *GLOBIS University* 04/2026 – Present | Tokyo, Japan
Graduate business studies focused on strategy, finance, organizational management, critical thinking, and technology-driven business transformation.

Matsuo-Iwasawa Laboratory Global Consumer Intelligence (GCI) Program, in progress 2026 | Tokyo, Japan
The University of Tokyo
Applied AI and data science program covering data analysis, machine learning fundamentals, and data-driven business problem solving.

PROFESSIONAL EXPERIENCE

Frameworks / FRAMEWORX — Daiwa House Group 09/2026 – Present | Tokyo, Japan
Tech Lead — Next-Generation WMS

- **Lead technical planning and architecture for a next-generation enterprise Warehouse Management System, covering frontend, backend, cloud, security, and WMS/WCS integration.**
- Drive technology selection, architecture standardization, and engineering guidelines with a focus on long-term maintainability, extensibility, and enterprise-scale operations.

- Define and document architecture decisions, technical standards, and integration approaches while coordinating with engineering, product, and management stakeholders.
- Support technical evaluation and PoC activities for core platform technologies, security architecture, and future system integration.

Ikigai Co., Ltd., *Project Lead / Full-Stack Engineer — Contract*
07/2025 – 05/2026 | Tokyo, Japan

- Led 0→1 development of an AI chat game platform within a **20-person cross-functional team**, covering requirements, architecture, implementation, and release.
- Built the frontend with **React and TypeScript** and backend APIs with **Go**, including chat history, session management, state handling, and LLM integration.
- Provisioned AWS infrastructure using **Terraform**, including Lambda, API Gateway, and DynamoDB, improving reproducibility across development and test environments.
- Designed authentication and authorization using **Keycloak** and contributed to sprint planning, technical decisions, code reviews, development standards, and release management.

Nagashima Konpo Co., Ltd., *Full-Stack Engineer — Contract*
12/2024 – 12/2025 | Kanagawa, Japan

- **Developed production web and mobile applications for a SaaS platform serving the packaging industry, currently used by more than 10 Japanese companies, within a ~10-person project team using React, Next.js, React Native, and Expo.**
- Built and maintained serverless functionality with **AWS Amplify, Lambda, AppSync, DynamoDB, and S3**, supporting cross-platform business workflows.
- Improved search and large-data processing through **database indexing, request reduction, and application-level optimization**, reducing timeout and performance issues.
- Supported the **Node.js 16 → 20 migration**, technical PoCs, code reviews, external developer support, and production releases.

Flaretech Co., Ltd. — formerly Marvel, *Software Engineer / Project Lead*
03/2023 – 05/2025 | Tokyo, Japan

- Led multiple **~5-person client projects** from requirements gathering and technical documentation through React/Next.js development, AWS deployment, and production support.
- Built recruitment and multilingual web platforms using **React, Next.js, TypeScript, and AWS serverless services**, including Lambda, S3, CloudFront, SES, and Amplify.
- Worked directly with Japanese clients on requirements definition, specifications, presentations, and delivery coordination, acting as a bridge between business and engineering teams.

Independent Freelance, *Full-Stack Engineer*
08/2021 – 01/2023

- Delivered multiple web applications and business systems for clients in **1–2 person delivery environments**, covering requirements, design, implementation, deployment, and maintenance.
- Built frontend applications with **React and Vue.js** and backend systems with **Python/Django and PHP**, including data-processing and automation functionality.
- Developed SNS bots, data collection systems, e-commerce improvements, and business-process automation solutions across multiple client engagements.
- Worked directly with clients to translate business requirements into technical solutions and supported operational and workflow improvements.
